Patent No. US20020168742A1
GENERAL INFORMATION:
APPLICANT: Kapellor-Libermann, Rosana
APPLICANT: Acton, Susan L.
TITLE OF INVENTION: 59079 and 12599, Protein Kinase Family
TITLE OF INVENTION: Members and Uses Therefor
FILE REFERENCE: MPIZ001-047PIRCP1(M)
CURRENT APPLICATION NUMBER: US/10/077,130
CURRENT FILING DATE: 2002-02-15
PRIOR APPLICATION NUMBER: 60/269201
PRIOR FILING DATE: 2001-02-15
NUMBER OF SEQ ID NOS: 9
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8.5%; Score 112; DB 9; Length 7968; 27.7%; Pred. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. /SIDS2/gcgdata/geneseg/genesegp-emb1/AA2000.DAT: /SIDS2/gcgdata/geneseg/genesegp-emb1/AA2001.DAT: /SIDS2/gcgdata/geneseg/genesegp-emb1/AA2002.DAT:

useful

```
The present sequence is a human pituitary hormone, pituitrone (clone HKGDL36). Pituitrone is highly expressed in pituitary or gland and is also expressed in brain tissues, spinal cord and kidney. It may be used as antigens in the production of antibodies against pituitrone and in assays to identify modulators. Pituitrone cDNAs are also useful in gene therapy. Pituitrone may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate pituitrone expression. It may be useful in treating disorders related to reproductive and renal system, immune disorders, disorders of haematopoietic cells (e.g., anaemia, Digeorge syndrome, ataxia telangiectasia and Wiskott-Aldrich disorder), blood coagulation disorders, autoimmune disorders (e.g. Addison's disease, multiple sclerosis and systemic lupus errythematosus (SLE)), hyperproliferative disorders (e.g. neoplasms of bone, liver and pancreas) and infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral scleroslis; Shy-brager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;

  The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, farminosouppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathles and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the Activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed

AABBBB60 (I) which have a hydrophobic domain. (I) have immunosuppressant, anti-flay, neuroprotective, anti-flame and vulnerary, anti-floss.

Ca AABBB606 (I) which have a hydrophobic domain. (I) have immunosuppressant, corepopting. In the case of the cativities, and can be used an anti-flammatory and cytostatic activities, and can be used in gene therapy. (I) can be used as pharmaceuticals and as antigens of probes for genetic diagnosis and gene sources for gene therapy or for producing (I) in large quantities. Cells containing (II) are used for the detection of ligands or receptors corresponding to membrane or secretory proteins and to screen small molecule novel pharmaceuticals.

Cantibodies directed to (I) can be used for the detection, quantification and purification of (I). Activities of (I) may include cytokine and cell proliferation/differentiation function, immune stimulating or suppressing activity, haematopolesis regulating activity, tissue growth activity, activity, chemotactic/chemokinetic activity, haemacory cativity, chemotactic/chemokinetic activity, haemacory cativity, and (II) can be used to treat autoimmune disorders e.g. multiple sclerosis, HIV infections, anaemia, burns, ulcers, osteoporosis, contained the contained c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      vitamins and minerals, to effect behavioural characteristics, to affect appetite, and can act as antigens in vaccines to raise an immune response to the protein or another material cross-reactive with the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            wound healing, as nutritional sources or supplements e.g. as amino acid, carbon or nitrogen source, to effect metabolism, catabolism, anabolism, processing and utilisation of dietary fat, protein, carbohydrate,

in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer disgnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; secreted protein; proliferative disorder; cancer; tumour; asthma; foetal abnormality; developmental abnormality; haematopoietic disorder; lumnune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; Parkinson's disease; cognitive disorder; schizophrenia; skin disorder; psoriasis; sepsis, diabetes; atherosclerosis; cardiovascular disorder; inflammation; neurological disorder; Alzhelmer's disease; food additive; anglogenic disorder; Kidney disorder; gastrointestinal disorder; allergy; pregnancy-related disorder; endocrine disorder; infection; wound healing; gene therapy.
                                                                                                                                                                                                                                                                                                                       C.N.S disorders.

Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 RSVPRGEAAGAVQELARALAHLLEAERQERARAEAQEAEDQQARVLAQLLRVWGAPRNSD 120

                                                                                                                                                                                                                                                                                                                                                                     AAD11630-AAD11721 represent CDNAs corresponding to 71 human secreted
protein genes, and AAE06041-AAE06132 represent the proteins they encode.

CC AAE06133-AAE06205 represent human secreted protein fragments.

CT AAE06133-AAE06205 represent human secreted protein fragments.

CT has secreted proteins and their genes are useful for preventing, treating

CC or ameliorating medical conditions, e.g., by protein or gene therapy.

CC Pathological conditions can be diagnosed by determining the amount of the

CC new protein in a sample or by determining the presence of mutations in

CC the new genes. Specific uses are described for each of the 71 genes,

CC based on the tissues in which they are most highly expressed, and include

CC developing products for the diagnosis or treatment of proliferative

CC disorders, cancer, tumours, foetal and developmental abnormalities,

CC haematopoietic disorders, diseases of the immune system, AIDS, autoimmune

CC diseases (e.g., rheumatoid arthritis), inflammation, allergies,

CC diseases (e.g., Alzheimer's disease, Parkinson's disease),

CC diseases (e.g., Alzheimer's disease, Parkinson's disease),

CC ognitive disorders, schizophrenia, asthma, skin disorders,

CC proteins can also be used to aid wound healing and epithelial cell

CC proteins can also be used to aid wound healing and epithelial cell

CC proteins can also be used to aid wound healing and epithelial consumpration, to prevent skin aging due to sunburn, to maintain organs

CD perferation, to prevent skin aging due to sunburn, to maintain organs

CD perfere transplantation, for supporting cell culture of primary tissues,

CD perferences, and in chemotrais, and can be used as a food additive for an and and an expension and additive for an analysis and can be used as a food additive for an expension and an expension and additive for an analysis and can be used as a food additive for an expension and additive for an expension and additive for an expension 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; secreted protein; gene therapy; immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; opthalmalogical; antimum disease; neoplasm; rheumatoid arthritis; hyperproliferative disorder; cardiac arrest; cardiovascular disorder; cerebral ischaemla; anglogenesis; nervous system disorder; Alzheimer's disease; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein of

The invention relates to an isolated nucleic acid molecule (or its fragment, homologue complement or allelic variant) encoding a human secreted protein (and its fragment, domain, epitope, variant, secreted form and species variant). Also included are a recombinant vector comprising the nucleic acid, a recombinant host cell comprising the nucleic acid, a recombinant host cell that expresses the secreted protein, a recombinant host cell that expresses the secreted protein and a method of identifying a binding partner of the secreted protein. The nucleic acid and protein are used to prevent, diagnose, treat or amelicante a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep for example autoimmune diseases e.g. rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The present sequence represents a novel human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, anglogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. Many other diseases and disorders are listed in the specification. The polypeptides can also be used to aid wound healing an epithelial cell proliferation, to prevent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel 71 isolated secreted polypeptides and polynucleotides encoding the polypeptides, useful for treating Huntington's disease, sepsis, meningitis, thrombocytopaenia, haemolytic anaemia, rheumatoid arthritis,

Human secreted protein sequence SEQ ID NO:238.

(first entry)

09-MAY-2000

AAY87199;

AAY87199 standard; Protein; 166 AA.

RESULT 9 AAY87199

```
The polynucleotide sequences given in AAY98017 to AAX98108 encode the human secreted proteins given in AAY87064 to AAX8723. Human secreted proteins given in AAY87064 to AAX8723. Human secreted protein can have activities based on the tissues and cells the genes are expressed in Examples of activities include: cytostatic; immunosuppressive; antiinflammatory; nootropic; neuroprotective; and antialergic. The polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polypeptides can be used for developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and focatal deficiencies, blood disorders, diseases of the immune system, allocation of the control 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               preservatives. The proteins are also useful for identifying their binding partners. AAZ98008 to AAZ98016 and AAY87063 are sequence used in the exemplification of the present invention.

New isolated human genes, useful for diagnosis and treatment of, e.g.

cancers, neurological or blood disorders Disclosure; Page 470; 494pp; English.

```
antiallergic. The polynucleotides and their corresponding secreted antiallergic. The polynucleotides and their corresponding secreted antiallergic. The polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polypeptides in a polymucleotides. Bunam secreted protein s and their polymucleotides can be used for developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and foetal deficiencies, blood disorders, diseases of the immune system, autoimmune diseases, hepatic and renal disease, inflammation, allergies, Alzheinmer's disease, behavioural disorders, solizophrenia, osteoporosis, arthritis, infections, AlDS, spinal cord injuries, transpant rejection, diabetes, asthma, sepsis, acne, psoriasis, cardiovascular disorders and metabolic disorders. The proteins or polynucleotides can also be used as food additives or proteins or polynucleotides can also be used as food additives or proteins are also useful for identifying their binding partners. AAZ38008 to AAZ38006 and AAX87063 are sequence used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             human secreted proteins given in AAY87064 to AAY87223. Human secreted protein can have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The polynucleotide sequences given in AAZ98017 to AAZ98108 encode the

The stablogical conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 71 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune fliesases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, tidney disorders, gastrointestinal disorders, angiogenic disorders, schizophrenia, asthma, skin disorders, angiogenic disorders, tidney disorders, gastrointestinal disorders,

pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotraxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassay or enzyme linked immunosochent assay (ELISA).

The present sequence represents a human secreted protein fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel 71 isolated secreted polypeptides and polynucleotides encoding the polypeptides, useful for treating Huntington's disease, sepsis, meningitis, thrombocytopaenia, haemolytic anaemia, rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Shi Y;

Secreted protein (and its ladguent, commain, epilope, variant, secreted form and species variant). Also included are a recombinant vector comprising the nucleic acid, a recombinant host cell comprising the nucleic acid, a recombinant host cell comprising the nucleic acid, a recombinant host cell that expresses the secreted protein and method of identifying a binding partner of the secreted protein. The nucleic acid and protein are used to prevent, diagnose, treat or ameliorate a medical condition in e.g. or ambalis, goats, horses, cats, dogs, chickens or sheep for example autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. rheumatoid arthritis, cardiovascular disorders e.g. rheumatoid arthritis, cardiovascular disorders e.g. cardiac arrest, cerebroascular disorders e.g. cardiac arrest, cerebroascular disorders e.g. cardiac arrest, cerebroascular disorders e.g. cardiac arrest, or symboritar disorders e.g. corneal infection. Many other diseases and disorders are listed in the specification. The polypeptides can also be used at oaid wound healing an epithalal cell proliferation, to prevent supporting call culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The present corrected protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Digeorge syndrome; haematopoietic cell; ataxia telangiectasia; Wiskott-Aldrich disorder; blood coagulation disorder; Addison's disease; autoimmune disorder; multiple sclerosis; systemic lupus erythematosus; SLE; hyperproliferative disorder; gene therapy; neoplasm; infectious disease; immunomodulatory; cytostatic; antimicrobial.

                                                                                                                                                                                                                          The present sequence is a mouse pituitary hormone, pituitrone. Pituitrone is highly expressed in pituitary gland and is also expressed in brain tissues, spinal cord and kidney. It may be used as antigens in the production of antibodies against pituitrone and in assays to identify modulators. Pituitrone cDNAs are also useful in gene therapy. Pituitrone may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate pituitrone expression. It may be useful in treating disorders related to reproductive and renal system, immune disorders, disorders of

The present sequence is a consensus sequence of human, mouse and rate pitulitrone. Pitulitrone is highly expressed in pitulitary gland and is also expressed in brain tissues, spinal cord and kidney. Pitulitrone may be used as antigens in the production of antibodies against cord pitulitrone and in assays to identify modulators. Pitulitrone cDNAs are also useful in gene therapy. Pitulitrone may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate treatment and diagnosis of diseases associated with inappropriate to pitulitrone expression. It may be useful in treating disorders related to reproductive and renal system, immune disorders, disorders of hematopoietic cells (e.g., anaemia, Digeorge syndrome, ataxia telangiectasia and Wiskott-Aldrich disorder), blood coagulation classical and systemic lupus erythematosus (SLE), hyperproliferative disorders (e.g. neoplasms of bone, liver and pancreas) and infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disease;

CC Used as antigens in the production of antibodies against pituitrone or pituitrone is highly expressed in pituitary hormone, pituitrone.
CC used as antigens in the production of antibodies against pituitrone and in assays to identify modulators. Pituitrone converses in the production of antibodies against pituitrone and in assays to identify modulators. Pituitrone converses of the seases associated with inappropriate constitutive and renal system, immune disorders disorders of the manatopoletic cells (e.g., anaemia, bigecye syndrome, ataxia telanglectasia and Wiskott-Aidrich disorders, disorders of associated with inappropriate consistence in the solution of the solution

                                                                                                                               protein used in the method of the invention. Host cells containing the Tango protein are used to produce recombinant proteins for raising antibodies. It is also used in identifying specific binding agents (including cognate receptors), which can be used to determine amounts of recombinant protein in cells or therapeutically. Antibodies or other specific binding agents, are used to detect recombinant proteins and fragments of the Tango used to detect recombinant proteins and fragments for detecting the Tango gene, specifically mRNA, in usual hybridisation or amplification assays. These assays are used for diagnosis of diseases associated with abnormal expression of Tango proteins, e.g. detecting mutations in the Tango gene. Fragments of the Tango uncleic acid sequence are also used for genetic mapping and chromosome identification, and as antisense, riboxyme or triplex-forming therapeutics. Antibodies may also be used to generate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

                                                                                                                                                                                                                                                                                                                                                            ö
                                                  The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system diseases, such as Alzheimer's Parkinson's disease. Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and the construction of the activity, arthritis and inflammation, leukaemias and the construction of the activity, arthritis and inflammation, leukaemias and the construction of the activity, arthritis and inflammation, leukaemias and the construction of the activity, arthritis and inflammation, leukaemias and the construction of the construction of the activity, arthritis and inflammation.
                                                                                                                                                                                                                                                     Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                449
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                509

immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous lucialised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                 945
                                                                                                                                                                                                                                                                                                                               882
                                                                                                                                                                                                                                                                                                                                                      194
                                                                                                                                                                                                                                                                                                                                                                                                    254

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä

Pituitrone is highly expressed in pituitary gland and is also expressed in brain tissues, spinal cord and kidney. It may be used as antigens in the production of antibodies against pituitrone and in assays to identify modulators. Pituitrone cDNAs are also useful in gene therapy. Pituitrone may be used in the prevention, treatment and diseases associated with inappropriate pituitrone expression. It may be useful in treating disorders related to reproductive and renal system, immune disorders, disorders of the amenatopoletic cells (e.g., anamemia, Digeorge syndrome, ataxia telangiectasia and Wiskott-Aldrich disorder), blood coagulation disorders, autoimmune disorders (e.g. Addison's disease, multiple

AABB8606 (I) which have a hydrophobic domain. (I) have immunosuppressant, anti-live, neuroprotective, anti-lanaemic, vulnerary, anti-licer, anti-lifer, anti-inflammatory and cytostatic activities, and can be used in gene therapy. (I) can be used as pharmaceuticals and as antigens to prepare antibodies. DNA and cDNA (II) encoding (I) can be used aspected in gene therapy or for producing (I) in large quantities. Cells containing (II) are used for producing (I) in large quantities. Cells containing (II) are used for the detection of ligands or receptors corresponding to membrane or secretory proteins and to screen small molecule novel pharmaceuticals. Antibodies directed to (I) can be used for the detection, quantification and purification of (I). Activities of (I) may include cytokine and cell proliferation/differentiation function, immune stimulating or suppressing activity, haematopolesis regulating activity, tissue growth activity, activity, haematopolesis regulating activity, tissue growth activity, activity, receptor/ligand activity, and anti-inflammatory activity. (I) and (II) can be used to treat autoimmune disorders e.g. multiple sclerosis, HIV infections, anaemia, burns, ulcers, osteoporosis, continuamatory bowel disease and tumours. (I) and (II) can also be used for carbon or nitrogen source, to effect metabolism, catabolism, anabolism, processing and utilisation of dietary fat, protein, carbohydrate,

The polynucleotide sequences given in AA298017 to AA298108 encode the human secreted proteins given in AAY87064 to AAX87223. Human secreted human secreted proteins given in AAY87064 to AAX87223. Human secreted compared to a protein can have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; cimhusouppressive; antiinflammatory; nootropic; neuroprotective; and activities include: cytostatic; cresponding secreted antialergic. The polynucleotides and their corresponding secreted polyneptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a conditions. As determining the presence of mutations in the new conditions. The man secreted protein s and their polynucleotides can be used for developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and forteimmune diseases, hepatic and renal disease, inflammation, altergies, Alzheimer's disease, behavioural disorders, schizophrenia, catchimmune diseases, hepatic and renal disease, inflammation, altergies, arthritis, infections, And Spinal cord injuries, transplant rejection, diabetes, asthma, sepsis, acne, psoriasis, cardiovascular disorders, and metabolic disorders. The

proteins or polynucleotides can also be used as food additives or
preservatives. The proteins are also useful for identifying their
binding partners. AAZ98008 to AAZ98016 and AAY87063 are sequence used
the exemplification of the present invention.

AAD11630-AAD11721 represent cDNAs corresponding to 71 human secreted protein genes, and AAE06041-AAE06132 represent the proteins they encode. AAE06132-AAE06205 represent human secreted protein fragments.

The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. AEACHOGOGICAL conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 71 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; secreted protein; proliferative disorder; cancer; tumour; asthma; foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; AIDS; autoimmune disease; rheumatobicatic disorder; Parkinson's disease; cognitive disorder; schizophrenia; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; inflammation; neurological disorder; Alzheimer's disease; food additive; angiogenic disorder; kidney disorder; psegnancy-related disorder; endocrine disorder; allergy; pregnancy-related disorder; endocrine disorder; infection; wound healing; cell culture; chemotaxis; vulnerary; binding partner identification;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human secreted protein-encoding gene 48 cDNA clone HKGDL36, SEQ ID NO:58
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Shi Y;

haematopoletic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurobgical disorders (e.g., Alzheimmer's disease, Parkinson's disease), conditive disorders (e.g., Alzheimmer's disease, Parkinson's disease), conditive disorders, schizophrenia, asthma, skin disorders (e.g., and stone disorders, atherosclerosis, cardiovascular disorders, and sorders, independent disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a content of the invention can be used in alleadismissible seguing with the disorders mentioned above, and in diagnostic immunoassays e.g., and other assay (ELISA).

vector, an antibody against the secreted protein, a recombinant host cell that expresses the secreted protein and a method of identifying a binding partner of the secreted protein. The nucleic acid and protein are used to prevent, diagnose, treat or ameliorate a medical condition in e.g. prevent, ance, rabbits, goats, horses, cats, dogs, chickens or sheep for example autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. rheumatoid arthritis, cardiovascular disorders e.g. cardiac arrest, cerebroascular disorders e.g. cardiac arrest, cerebroascular disorders e.g. corneal infections caused by bacteria, viruses and fungi and calsorders e.g. corneal infections many other diseases and disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing an epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase storage capabilities. The present

AAF94417 to AAF94516 encode the human proteins given in AAB88557 to AAF88606 (I) which have a hydrophobic domain. (I) have immunosuppressant, anti-HIV, neuroprotective, antianaemic, vulnerary, antiulcer, osteopathic, anti-inflammatory and cytostatic activities, and can be used in gene therapy. (I) can be used as pharmaceuticals and as antigens to prepare antibodies. DNA and CDNA (II) encoding (I) can be used as probes for genetic diagnosis and gene sources for gene therapy or for

producing (I) in large quantities. Cells containing (II) are used for the detection of ligands or receptors corresponding to membrane or secretory proteins and to screen small molecule novel pharmaceuticals. Antibodies directed to (I) can be used for the detection, quantification and purification of (I). Activities of (I) may include cytokine and cell proliferation/differentiation function, immune stimulating or suppressing activity, haematopolesis regulating activity, tissue growth activity. CC activity, haematopolesis regulating activity, tissue growth activity. CC and thrombolytic activity, receptor/ligand activity and anti-inflammatory activity. (I) and (II) can be used to treat autoimmune disorders e.g. and thrombolytic activity in infections, anaemia, burns, ulcers, osteoporosis, inflammatory bowel disease and tumours. (I) and (II) can also be used for wound healing, as nutritional sources or supplements e.g. as amino acid, carbon or nitrogen source, to effect metabolism, catabolism, anabolism, processing and utilisation of dietary fat, protein, carbohydrate, contents and minerals, to effect behavioural characteristics, to affect the appetite and content and an another and another the protein or another material cross-reactive with the protein 88888888888888888888888888

The Invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM36642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous asystem, such as peripheral nervous system, such as modentral nervous system, such as peripheral nervous system diseases, unot as Alzhehmer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemoteactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ä

```
The present sequence is a cDNA encoding mouse pituitary hormone, pituitrone. Pituitrone is highly expressed in pituitary gland and is also expressed in brain tissues, spinal cord and kidney.

It may be used as antigens in the production of antibodies against pituitrone and in assays to identify modulators. Pituitrone cDNAs are also useful in gene therapy. Pituitrone may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate pituitrone expression. It may be useful in treating disorders related to reproductive and renal system, immune disorders, disorders of haematopoietic cells (e.g., anaema, blageorge syndrome, ataxia telangiectasia and Wiskott-Aldrich disorder), blood coagulation disorders, autoimmune disorders (e.g., Addison's disease, multiple sclerosis and systemic lupus erythematosus (E.E.), hyperproliferative disorders (e.g. neoplasms of bone, liver and pancreas) and infectious

fragment, homologue complement or allelic variant, encoding a human secreted protein (and its fragment, domain, epitope, variant, secreted form and species variant). Also included are a recombinant vector comprising the nucleic acid, a recombinant host cell comprising the nucleic acid, a recombinant host cell comprising the centor, an antibody against the secreted protein, a recombinant host cell that expresses the secreted protein and a method of identifying a binding partner of the secreted protein. The nucleic acid and protein are used to partner of the secreted protein. The nucleic acid and protein are used to prevent, diagnose, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep for example autoimmune diseases e.g. rheumatoid arthritis, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infections caused by bacteria, viruses and fungi and coular disorders e.g. corneal infection. Many other diseases and classification the polypeptides can also be used to aid wound healing an epithelial cell proliferation, to prevent

cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonuclectides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of the rapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (11) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many c residues to be determined simultaneously. ABG1310-ABG54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in
                                                                                                                                                                                                                                                                                                                                                                                                                        ö

methylation of a particular cytosine in a motif 5'-cp6-3', present in a genomic sample of DNA. The sample is tracted chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonocleotides and/or peptide nucleic acid (NNA) oligomers and the degree of hybridisation to both classes is determined from the Label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation. The method allows the methylation status of many C residues to be determined simultaneously.

ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the degree of cytosine methylation described in Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA This invention describes a novel method for determining the degree Claim 12; 56pp + Sequence Listing; 56pp; German. the disclosure of the invention.

                             This is the amino acid sequence of the human Tango-81 protein used in the method of the invention. Host cells containing the Tango protein are used to produce recombinant proteins for raising antibodies. It is also used in identifying specific binding agents (including cognate receptors), which can be used to determine amounts of recombinant protein in cells or therapeutically. Antibodies or other specific binding agents, are used to detect recombinant proteins and fragments of the Tango concerns be used as probes or primers for detecting the Tango gene, specifically mRNA, in usual hybridisation or amplification assays. These assays are used for diagnosis of diseases associated with abnormal expression of Tango proteins, e.g., detecting mutations in the Tango gene. Fragments of the Tango
                                                                                                                                                                            nucleic acid sequence are also used for genetic mapping and chromosome identification, and as antisense, ribozyme or triplex forming therapeutics. Antibodies may also be used to generate

The present sequence is a human pituitary hormone, pituitrone (clone HKGDL36). Pituitrone is highly expressed in pituitary gland and is also expressed in brain tissues, spinal cord and kidney. It may be used as antigens in the production of antibodies against pituitrone and in assays to identify modulators. Pituitrone cDNAs are also useful in gene therapy. Pituitrone may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate pituitrone expression. It may be useful in treating disorders related to reproductive and renal system, immune disorders, disorders of

                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM36642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system autopathies and central nervous system diseases, such as lazhelmer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinianian activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, as assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ä

CC AAE9417 to TaAE94516 encode the human proteins given in AAB88557 to AAE98606 (I) which have a hydrophobic domain. (I) have immunosuppressant, costeopathic, anti-inflammatory and cytostatic activities, and can be used as paramaceuticals and as antigens used in gene therapy. (I) can be used as paramaceuticals and as antigens to prepare antibodies. DNA and cDNA (II) encoding (I) can be used as probes for genetic diagnosis and gene sources for gene therapy or for probes for genetic diagnosis and gene sources for gene therapy or for corpucting (I) in large quantities. Cells containing (II) are used for the detection of ligands or receptors corresponding to membrane or secretory proteins and to screen small molecule novel pharmaceuticals.

CX Antibodies directed to (I) can be used for the detection, quantification and purification of (I). Activities of (I) may include cytokine and cell proliferation/differentiation function, immune stimulating or suppressing activity, haematopolesis regulating activity, tissue growth activity.

CX antibodies directions are receptor/ligand activity and anti-inflammatory cativity. (I) and (II) can be used to treat autoimmune disorders e.g. multiple sclerosis, HIV infections, anaemia, burns, ulcers, osteoporosis, conflammatory bowel disease and tumours. (I) and (II) can also be used for wound healing, as nutritional sources or supplements e.g. as amino acid, carbon or nitrogen source, to effect metabolism, catabolism, and dullisation of dietary fat, protein, carbohydrate, cuthamins and minerals, to effect behavioural characteristics, to affect appetite, and can act as antigens in vaccines to raise an immune response con the protein or another material cross-reactive with the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosls; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;

the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

Pituitrone is highly expressed in pituitary gland and is also expressed in brain tissues, spinal cord and kidney. It may be used as antigens in the production of antibodies against pituitrone and in assays to identify modulators. Pituitrone cDNAs are also useful in gene therapy. Pituitrone may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate

                                                     The present sequence is a consensus sequence of human, mouse and rat pituitrone. Pituitrone is highly expressed in pituitary gland and is also expressed in brain tissues, spinal cord and kidney. Pituitrone may be used as antigons in the production of antibodies against pituitrone and in assays to identify modulators. Pituitrone cDNAs are also useful in gene therapy. Pituitrone may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate
                                                                                                                                                       pitultrone expression. It may be useful in treating disorders related to reproductive and renal system, immune disorders, disorders of haematopoletic cells (e.g., anaemia, Digeorge syndrome, ataxia telangiectasia and Wiskott-Aldrich disorder), blood coagulation disorders, autoimmune disorders (e.g. Addison's disease, multiple sclerosis and systemic lupus erythematosus (SLE), hyperproliferative disorders (e.g. neoplasms of bone, liver and pancreas) and infectious

AAD11630-AAD11721 represent cDNAs corresponding to 71 human secreted
protein genes, and AAE06041-AAE06132 represent the proteins they encode.

AEA06133-AAE06505 represent human secreted protein they encode.
The secreted proteins and their genes are useful for preventing, treating
or ameliorating medical conditions, e.g., by protein or gene therapy.
The secreted proteins can be diagnosed by determining the amount of the
new protein in a sample or by determining the presence of mutations in
the new genes. Specific uses are described for each of the 71 genes,
based on the tissues in which they are most highly expressed, and include
developing products for the diagnosis or treatment of proliferative
disorders, cancer, tumours, foetal and developmental abnormalities,
haematopoietic disorders, diseases of the immune system, AIDS, autoimmune
diseases (e.g., rheumanatoid arthritis), inflammation, allergies,
cognitive disorders (e.g., Alzheimer's disease, Parkinson's disease),
cognitive disorders, schizophrenia, asthma, skin disorders (e.g.,
prognancy-related disorders, and electrons. The
proteins can also be used to aid wound healing and epithelial cell

fragment, homologue complement or allelic variant) encoding a human secreted protein (and its fragment, domain, epitope, variant, secreted fragment, homologue complement or allelic variant) encoding a human secreted protein (and its fragment, domain, epitope, variant, secreted form and species variant). Also included are a recombinant vector comprising the nucleic acid, a recombinant host cell comprising the vector, an antibody against the secreted protein, a recombinant host cell that expresses the secreted protein and method of identifying a binding partner of the secreted protein and method of identifying a binding partner of the secreted protein and method of identifying a binding partner of the secreted protein. The nucleic acid and protein are used to prevent, diagnose, treat or ameliorate a medical condition in e.g. prevent, abblist, goats, horses, cats, dogs, chickens or sheep for example autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infection. Many other diseases and disorders are listed in the specification. The polypeptides can also be used to aid wound healing an epithalial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxia. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The present sequence represents a novel human secreted protein of the invention.
                                                                                                                            Human; secreted protein; gene therapy; immunosuppressive; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; notropic; neuroprotective; antibacterial; virucide; fungicide; opthalmalogical; autoimmune disease; neoplasm; rheumatoid arthritis; hyperproliferative disorder; cardiac arrest; cardiovascular disorder; cerebral ischaemia; angiogenesis; nervous system disorder; Alzheimer's disease; infection; coular disorder; corneal infection; wound healing; skin aging; epithelial cell proliferation; food additive.

Human secreted protein can have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; immunosuppressive; antiinflammatory; nootropic; neuroprotective; and antialleringic. The polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating medical conditions, e.g. by protein or gene therapy. Also pathological conditions

can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polydedides. Human secreted protein s and their polynucleotides can be used for developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and foetal deficiencies, blood disorders, diseases of the immune system, autoimmune diseases, hepatic and renal disease, inflammation, allergies, Alzheimer's disease, behavioural disorders, schizophrenia, osteoporosis, arthritis, infections, ADS, spinal cord injuries, transplant rejection, diabetes, asthma, sepsis, acne, psoriasis, cardiovascular disorders, reproductive disorders, gastrointestinal disorders, respiratory disorders and metabolic disorders. The cardiovascular disorders and metabolic disorders. The proteins are also useful for identifying their binding partners. AAZ298008 to AAZ98008 and AAX87063 are sequence used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antiinflammatory; nootropic; neuroprotective; antiallergic; cancer; tumour; neurodegenerative disorder; developmental abnormality; allergy; foetal deficiency; blood disorder; immune system disorder; arthritis; autoimmune disease; hepatic disease; inflammation; Alzheimer's disease; behavioural disorder; schizophrenia; osteoporosis; infection; AIDS; spinal cord injury; transplant rejection; diabetes; asthma; sepsis; acne; psoriasis; cardiovascular disorder;

The polynucleotide sequences given in AA298017 to AA298108 encode the human secreted proteins given in AAY87064 to AAY87223. Human secreted proteins given in AAY87064 to AAX87223. Human secreted protein can have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; immunosuppressive; antiniflammatory; nootropic; neuroprotective; and antialized; or the polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the proteins and their polynucleotides can can be diagnosed by determining the amount of the new polypeptides in a sample or by determining products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, diseases of the immune system, autoimmune diseases, boad disorders, diseases of the immune system, allergies, Alzheimer's disease, behavioural disorders, schizophrenia, cartoimmune diseases, behavioural disorders, schizophrenia, cardiovascular disorders asthma, sepsis, acne, psoriasis, cardiovascular disorders and metabolic disorders. The proteins are also used as food additives or proteins or polynucleotides can also be used as food additives or proteins are also used also defined binding partners. AA298008 to AA298016 and AAX87063 are sequence used in exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  foetal abnormality; developmental abnormality; haematopoletic disorder; immune system disorder; ALDS; autoimmune disease; rheumatoid arthritis; Parkinson's disease; cognitive disorder; schizophrenia; skin disorder; psoriasis; sepsis, diabetes; atherosclerosis; cardiovascular disorder; inflammation; neurological disorder; Alzheimer's disease; food additive; anglogenic disorder; klacker; allergy; pregnancy related disorder; endocrine disorder; allergy; pregnancy related disorder; endocrine disorder; allergy; cell culture; chemotaxis; vulnerary; binding partner identification;
